

AMENDMENTS TO THE SPECIFICATION

- In response to an objection by the Patent Office, please enter the following amendment deleting the *hyperlink* and associated words in the 2nd paragraph prior to the heading TECHNICAL FIELD:

-- The United States Patent Office (USPTO) has published a notice to the effect that the USPTO's computer programs require that patent applicants reference both a serial number and indicate whether an application is a continuation or continuation-in-part. Stephen G. Kunin, Benefit of Prior-Filed Application, USPTO Gazette March 18, 2003, ~~available at~~ <http://www.uspto.gov/web/offices/com/sol/og/2003/week11/patbene.htm>. The present Applicant Entity (hereinafter "Applicant") has provided above a specific reference to the application(s) *from which priority is being claimed* as recited by statute. Applicant understands that the statute is unambiguous in its specific reference language and does not require either a serial number or any characterization, such as "continuation" or "continuation-in-part," for claiming priority to U.S. patent applications. Notwithstanding the foregoing, Applicant understands that the USPTO's computer programs have certain data entry requirements, and hence Applicant is designating the present application as a continuation-in-part of its parent applications as set forth above, but expressly points out that such designations are not to be construed in any way as any type of commentary and/or admission as to whether or not the present application contains any new matter in addition to the matter of its parent application(s).

- In response to an objection by the Patent Office, please enter the following amendments in the specification, in the paragraphs located between the headings CROSS-REFERENCE TO RELATED APPLICATIONS and TECHNICAL FIELD:

-- 1. For purposes of the UTPTO extra-statutory requirements, the present application is related to ~~constitutes a continuation-in-part of~~ United States patent application entitled ACCELERATED RECEPTION OF SPATIAL TO TEMPORAL TRANSLATED DATA, naming William D. Hillis, Edward K.Y. Jung; Nathan P. Myhrvold, and Lowell L. Wood Jr. as inventors, filed contemporaneously on 11 December 2003 having United States Application Number 10/734,650, which is currently co-pending, or is an application of which a currently co-pending application is entitled to the benefit of the filing date.

2. For purposes of the UTPTO extra-statutory requirements, the present application is related to ~~constitutes a continuation-in-part of~~ United States patent application entitled SPATIAL TO TEMPORAL DATA TRANSLATION AND TRANSMISSION, naming William D. Hillis, Edward K.Y. Jung; Nathan P. Myhrvold, and Lowell L. Wood Jr. as inventors, filed contemporaneously on 11 December 2003 having United States Application Number 10/734,658, which is currently co-pending, or is an application of which a currently co-pending application is entitled to the benefit of the filing date.

3. For purposes of the UTPTO extra-statutory requirements, the present application is related to ~~constitutes a continuation-in-part of~~ United States patent application entitled RECEPTION OF SPATIAL TO TEMPORAL TRANSLATED DATA, naming William D. Hillis, Edward K.Y. Jung; Nathan P. Myhrvold, and Lowell L. Wood Jr. as inventors, filed contemporaneously on 11 December 2003 having United States Application Number 10/734,647, which is currently co-pending, or is an application of which a currently co-pending application is entitled to the benefit of the filing date. --

- In response to an objection by the Patent Office, please replace the ABSTRACT with the following substitute ABSTRACT:

Systems and methods determine organization of at least one content of at least one spatial data storage system. In one implementation, a system defines a schedule of content transmission in response to the organization of the content of the spatial data storage device. The content is transmitted according to the schedule so that the content is addressable at the one or more transmission times.
